

Care Planning in Care Homes – talking with residents

Care Planning is about thinking and planning ahead so that we can give each person the best possible care. If a person's health changes, it is better if we have a good plan for them.

READY Can we talk about why planning ahead helps people get better care?

Making a plan helps people who live in a care home, like you, think about their care and what is important to them. You may have talked with your family or a close friend about this before.

It is a good idea to talk about what might happen if you get unwell. This could be from a health problem or illness you have already. It might be a new illness. Some residents may get unwell with coronavirus or another infection. We can make plans and talk with your family if you wish.

EXPECT It would help to hear what you know about your health, and think might happen.

People have different things they want to talk about. Please ask us about anything you want to know or are worried about. We can make a plan with you now, if you are ready.

DIAGNOSIS There are things we know about your health, and things we're not sure about.

People who live in care homes are often in poorer health and need help with day to day living.

We are doing our best to help you to keep well, but it is possible you may get unwell at some point. Some treatments may not work for you, or you might not want them.

That's why it is important for us to talk about making a personal Care Plan with you.

MATTERS We'd like to know what's important to you, and how best to care for you.

We can put what you tell us in your care plan so we know how you would like to be cared for.

ACTION Let's talk about what we can do to care for you, and things that will not help.

Let's start with your health problems and make plans for what might happen. There are also some situations it is good to plan ahead for like a sudden illness or an infection.

Many people feel that staying in their familiar care home to be looked after is the best place when they are very ill and may be dying. Being comfortable is what matters to them. We have medicines in the care home to help us manage any symptoms or discomfort, if we need them.

Hospital treatment may be better in a few conditions, like a hip fracture. Going to hospital has benefits and risks. Can we talk about why that is, and how it might affect your care plan?

Antibiotic tablets or syrup, other medicines, and oxygen can be given in the home, if needed.

Has anyone talked with you about cardiopulmonary resuscitation or CPR? CPR is treatment to restart the heart. CPR does not work when a person is in very poor health or dying. If CPR will not help, it is better to record that information and focus on planning good care. Any other treatments that can help the person are still given. *(CPR is generally a GP/nurse discussion.)*

PLAN Let's make a Care Plan for you.

We keep your plan in the home in case we need it, and send a copy to your GP practice. The plan goes into your GP record and a secure record used by professionals if people need urgent care called a Key Information Summary (KIS). Your plan can be changed at any time.

There are some situations we can think about and discuss together. If you have any questions please ask me. You can talk to care home staff and people at the GP practice too.
